MinNoCat™

A Revolutionary Product in Diesel Exhaust Emissions Control Systems

In sensitive environments like mines, controlling emissions is critical. AirFlow Catalyst Systems has developed a device that Minimizes (Min) NO₂ (No) while reducing other critical emissions through Catalyst technology (Cat).

MinNoCat is ideal for equipment used in continuous operations. In addition to reducing the typical harmful emissions including CO, HC, and soot, MinNoCat effectively lowers NO₂ at device-out levels comparable to engine-out**.

MinNoCat™ offers the unique AirFlow benefits of

- PASSIVELY REGENERATING to MINIMIZE DOWNTIME and REDUCE MAINTENANCE COSTS
- Having the HIGHEST EFFICIENCY RATING of passively regenerating systems listed by MSHA†
- Eliminating need for expensive control equipment (except where required by law)
- Being a single, self-contained unit, built in a durable stainless steel can for the mining environment
- Requiring less space than active regeneration or combination devices

Rugged Construction
AirFlow’s MinNoCat™ is built for operating in rugged environments such as tunnels and underground mines. Physical features that add value and maximize performance efficiency:

- Canned in sturdy stainless steel material
- Constructed to withstand vibration
- Cooling jacketing available upon request

AirFlow’s MinNoCat Can Be Customized for a Variety of Applications:

The AirFlow Difference:

Industry-leading services:
- Customized Solutions
- Engineering Expertise
- Coating Expertise
- Technical Support (pre-, during, post-installation)
- Customer Service Focus

Additional industry leading products from AirFlow:
- EZCat™: Passively regenerating emissions reduction system, frequent idling conditions
- EZDoc™: Diesel Oxidation Catalyst Systems
- Custom Coatings
