

Atlas Copco SF and ZT/ZR Series Info

The SF scroll series relies on a radically new technology, ensuring economy in operation, extremely quiet running, minimum servicing and space saving, thanks to its simplicity and compact design. It is equipped with a highly efficient IP55 class F electric motor.

THE SF SERIES

These compressors have a minimum of maintenance requirements, 10,000 running hours practically without maintenance while intermediate routine operations remain restricted and easy to perform. Perfect for both point-of-use and regular compressor room installations, these small units deliver a high performance with minimal maintenance.

All compressors are manufactured in accordance with Atlas Copco's Quality and Environment Management System. This system complies fully with ISO 9001 and ISO 14001. All Atlas Copco dryers are tested to perform under the most demanding conditions.

THE ZT/ZR SERIES

The right choice

A smooth production process, a quality end product, the lowest operating and maintenance costs and ensuring a healthy environment. These are the inherent qualities of oil-free air compression. Evaluate the products and make the right selection: the ZR/ZT110-900 range.

BENEFITS

- . 100% oil-free - no risk of oil-contaminated air
- . No oil in the condensate
- . Completely ready-to-use package
- . Easy, low cost installation - no foundations
- . Air-cooled and water-cooled versions
- . Low cooling water consumption with water-cooled variant
- . Proven reliability: more than 50,000 product installations
- . True performance as per ISO 1217, Annex C, Ed. 3
- . Flexible as a base load or a top load machine
- . Consistent performance over the lifetime of the compressor
- . Operator and service friendly
- . Silenced package
- . Very low vibration level
- . Energy saving Variable Speed Drive & Full-Feature versions available
- . Integrated IMD dryer in FF version
